Summary

Final-year Computer Science student specializing in Agentic AI, Large Language Models (LLMs), and multimodal AI. Building AI products, conducting applied research, and developing scalable AI applications using Python, PyTorch, FastAPI, and PostgreSQL.

Education

Srinivas University Institute of Engineering and Technology, Computer Science and Engineering – Mangalore, Karnataka Oct 2023 – Mar 2027

- CGPA: 9.50/10

Guru Nanak Independent PU College, PCMB – Bidar, Karnataka June 2020 – May 2022

Experience

Research Intern, NITK Surathkal – Mangalore, Karnataka May 2026 – present

- Developing an AI-powered radiology report generation system using vision-language models and transformer-based architectures to generate structured clinical reports from medical images.
- Contributed to data preprocessing, feature extraction, model experimentation, and evaluation for multimodal medical AI workflows.

AI Social Impact Fellow (Remote, Part-time), Vitainspire – T-Hub, Hyderabad June 2026 – present

- Developing the Admin Dashboard for an agentic AI-based NGO transparency platform using Next.js, TypeScript, Prisma ORM, and Neon PostgreSQL.
- Integrated specialized AI agents for compliance validation, fraud detection, document verification, and campaign review within the NGO administration workflow.

Projects

AIRA (Individual) Oct 2025 – present

Built an AI communication platform that analyzes 6 communication dimensions and generates personalized feedback reports.

- Integrated LLM-powered conversation, adaptive questioning, and detailed feedback to help users improve confidence, communication, and interview performance.
- Validated the product with 50+ target users, incorporating structured feedback from students, educators, trainers, and professionals to refine the user experience.

BlogAgent (Individual) Mar 2026 – May 2026

Engineered a 3-agent workflow for research, writing, and editing, generating complete blog drafts in 6–7 minutes.

- Implemented configurable loop engineering, enabling autonomous multi-pass refinement to improve research depth, factual consistency, and content quality.
- Validated the platform with 20+ target users, including AI engineers, founders, content creators, and editors, incorporating feedback to refine usability and content quality.

ImpactBridge (Team-Project)

June 2026 – present

Built an AI-powered NGO transparency platform that bridges the trust gap between donors and NGOs through compliance verification, impact tracking, and proof-based reporting.

- Developed AI-assisted compliance, fraud detection, and document verification workflows with human approval gates for secure administrative decision-making.
- Automated verification across 6 compliance categories (PAN, Registration, 12A, 80G, FCRA, and Impact Proofs) using AI-assisted document analysis and administrator review workflows.

Leadership & Community

- Delivered AI and communication workshops as a Guest Trainer, reaching 750+ students across colleges and institutions.
- Built a LinkedIn community of 3,000+ professionals by sharing educational content on AI, networking, and career development.
- Participated in a 24-hour AI hackathon, designing and developing an end-to-end AI solution under strict time constraints.
- Competed in the State-Level SAP HackFest, collaborating on enterprise technology and problem-solving challenges.
- Served as Speaker's Club Coordinator, organizing public speaking sessions and mentoring students in communication and presentation skills.

Skills

Languages: Python, SQL

AI & ML: LLMs, Agentic AI, RAG, PyTorch, TensorFlow, Deep Learning, Prompt Engineering, Computer Vision, VLM, Transformers

Frameworks: FastAPI, Next.js, React, Tailwind CSS, Prisma ORM

Databases: PostgreSQL, Neon PostgreSQL

Tools: Git, GitHub, Docker, Railway, Render, Vercel

Concepts: System Design, Agentic System Design, Multi-Agent Orchestration

Research-Areas

Agentic RAG

Vision-Language Models.

Multimodal Learning.

Transformer architectures.
